GANGMAI Pest & Hygiene Solutions Limited
精美滅蟲及環衛規劃有限公司

About us

Established in 1983, Gang Mai has over 30 years of experience in the field of routine cleaning, exterior cleaning, sanitization and pest control services. Our clientele ranges from local businesses to international enterprises.

Years of experience and practiced flexibility have prepared us for all sorts of scenarios and allowed us to provide affordable, accessible and attentive services.

Sanitization Services

Our team of sanitization specialists is quick to response and trained to manoeuvre challenging situations at reasonable prices.

We offer **E-Call Services** in case of emergency and promise to arrive the scene within hours of initial call.

Diverse Cleaning Services

Daily Cleaning
Exterior Cleaning
Carpet Cleaning
Marble Restoration
VOC Elimination

We have skilled and experienced specialists to handle every situation and inconvenience our clients may face.

Pest Control

Our team of pest control specialists has years of experience and is equipped to tackle difficult pest problems that requires careful treatment.

Technology

- Mechanical Disruption NOT Dehydration or Chemical Poisoning
- Proven Effective for up to 24 hours on skin
- Proven Effective for up to 30 days on surfaces
- Proven effective for up to 100 washes on textiles
- Prevents Mutation (Superbugs)
- Supported by 100+ Independent Laboratory Tests
- Environmentally Friendly

Zono Surface Shield utilises a synthetic compound with a molecular structure that causes a physical rupture of microorganism cell walls.

Product: Quaternary Ammonium Compound

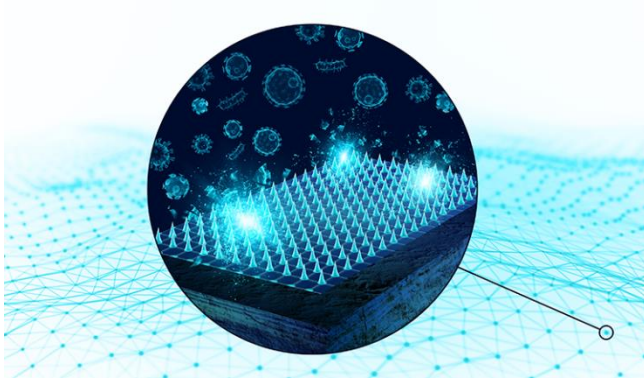

Chemistry: Covalently bonded biocidal molecules around a silicon polymer

A physical mechanism offers an alternative to alcohols, chemical action products,

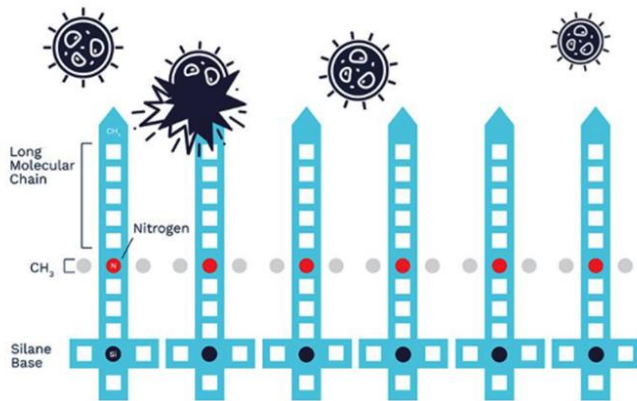

Environmental: colourless, odourless, non-leaching, non-corrosive and whilst completely gentle for humans and animals, it is deadly for a wide range of Virus, Bacteria and mould.

Application

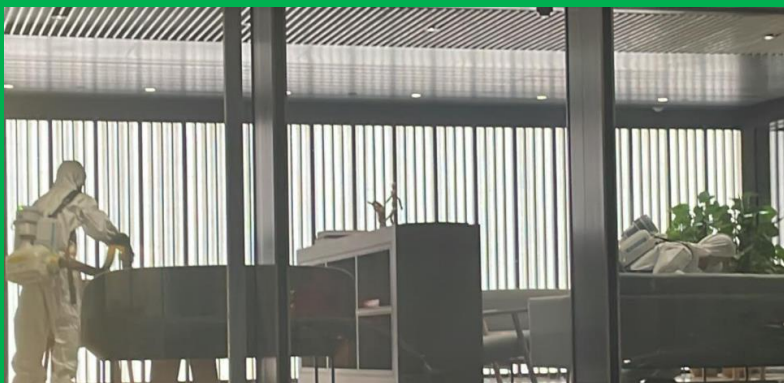

Surface application leaves behind a monomolecular layer that permanently bonds to the surface. These molecules are antimicrobial, polymers that covalently bond to the surface forming a barrier of positively charged microscopic pins.

The positively charged microscopic pins attract and pierce negatively charged pathogens. The pins rupture the cell walls. The layer of molecular antimicrobial pins carries on working for up to 30 days on surfaces. Routine cleaning can continue and does not disrupt the Zoono molecule or its antimicrobial activity.

Treatment Method

Disinfectant misting technology has evolved to effectively kill COVID-19 on or around positive spaces. Using zoono with hospital-grade Ultra low volume (ULV) fogger, our misting disinfection services are proven to work on all public Transport, Food Preparation and Manufacture, Medical, Hotels, Children's Centers, Office, Schools and Universities, etc. We apply misting to all of the high-touch points and open surfaces to provide the best protection against germs.
